Number of students registered: 80
Questions answered: 80,077
Hours spent online by students: 2,362

How have you successfully implemented Education Perfect at your school?

One class of year 11 students have been using the site all year as part of their course. They have been set parts of course coverage to learn and practice on a Friday the week before the work is taught. This has meant that students had seen the work before I taught it. The result was students were much quicker picking up content. The class was also set tasks to complete each week. It was great being able to see where students were having difficulty. I could then sit down with students who needed help and look through their working together.

I have two students who are using the site for extensions and another student for remedial help.

All maths and science classes are using the site for the NZQA digital assessment trial.

What are the different ways you use Education Perfect with your classes?

Because we do not have wireless in our classes we can only use it as a teaching tool in the computer lab if the lab is free. Students have mostly used the site at home.

How do you use Education Perfect with your junior students? And your senior students?

At this stage we have only used the site with one class of year 11 students as detailed above. All of our year 11 students participated in the maths World Series and really enjoyed themselves. Some of the weaker maths students scored the most points due to persistence.

What suggestions do you have for other schools?

Give Education Perfect a go with a class for a year. It takes a while for both teacher and student to realise the true potential of the site. It is a very powerful diagnostic tool and useful for differentiated learning.

1-2 sentence quote for the website about what you love about Education Perfect:

“The detailed instant individual feedback Education Perfect gives both students and teachers is very powerful.”

Attach any photos of students, and any great student quotes.

“This is a great way to learn and it is fun too. I found this really helpful for my upcoming exams.”

“ This was really cool! My brain hurts, but I love it! ”

“sweet”
